REPORT CYBER- SECURITY 2026

Proteggere il futuro, oggi

PRESENTATO A
EPICODE

PRESENTATO DA
LORENZO RIZZUTI

Primo esercizio decodificare la parola : "HSNFRGH"
Decodificata con Cifrario di Cesare -3.

The screenshot shows a Kali Linux desktop environment with a terminal window open. The terminal displays the following commands and output:

```
root@kali: ~  
Session Actions Edit View Help  
root@kali:~# echo "HSNFRGH" | tr 'A-Z' 'X-ZA-W'  
EPKCODE  
root@kali:~# echo "HSNFRGH" | tr 'A-Z' 'D-ZA-C'  
KVQIUJK  
root@kali:~# echo "HSNFRGH" | tr 'A-Z'  
tr: missing operand after 'A-Z'  
Two strings must be given when translating.  
Try 'tr --help' for more information.  
root@kali:~#
```

Seconda parola da cifrare :
QWJhIHZ6b2VidHI2bmdyIHB1ciB6ciBhciBucHB
iZXRI

Decifrata prima con base64 poi il risultato
decifrato con ROT13.
